

DAY 3 — TABLE EXTRACTION (MOD VERSION)

✅ WHERE WE ARE

titles ✅

text ✅

tables ❌ (raw string only)

✅ TODAY GOAL

structured["tables"] → real structured tables (rows + columns)

✅ FILES

app/parser/table_parser.py ← NEW

app/parser/pdf_parser.py ← MODIFY

app/ingestion/pipeline.py ← MODIFY

✅ STEP 1 — INSTALL

pip install docling

``

✅ STEP 2 — CREATE TABLE PARSER

 **app/parser/table_parser.py**

```
from docling.document_converter import DocumentConverter
```

```
def extract_tables(file_path):
```

```
    converter = DocumentConverter()
```

```
    result = converter.convert(file_path)
```

```
    tables = []
```

```
for table in result.document.tables:
```

```
    data = table.data
```

```
    if not data:
```

```
        continue
```

```
    tables.append({
```

```
        "columns": data[0],
```

```
        "rows": data[1:]
```

```
    })
```

```
return tables
```

✅ STEP 3 — MODIFY YOUR PDF PARSER

👉 REMOVE this part:

```
if "Table" in str(type(el)):
```

```
    structured["tables"].append(text)
```

👉 REPLACE with:

```
# DO NOT ADD TABLES HERE ANYMORE
```

```
pass
```

✅ Final parser:

```
from unstructured.partition.pdf import partition_pdf
```

```
def parse_pdf(file_path):
```

```
    elements = partition_pdf(filename=file_path)
```

```
    structured = {
```

```
"titles": [],  
"text": []  
}
```

```
for el in elements:
```

```
    text = el.text if hasattr(el, "text") else ""
```

```
    if "Title" in str(type(el)):
```

```
        structured["titles"].append(text)
```

```
    else:
```

```
        structured["text"].append(text)
```

```
return structured
```

```
``
```

✅ STEP 4 — UPDATE PIPELINE

 **app/ingestion/pipeline.py**

```
from app.parser.pdf_parser import parse_pdf
```

```
from app.parser.table_parser import extract_tables
```

```
def process_pdf(file_path):
```

```
    parsed = parse_pdf(file_path)
```

```
    tables = extract_tables(file_path)
```

```
    return {
```

```
        "titles": parsed["titles"],
```

```
        "text": parsed["text"],
```

```
        "tables": tables
```

```
}
```

✅ STEP 5 — TEST

```
from app.ingestion.pipeline import process_pdf
```

```
result = process_pdf("data/sample.pdf")
```

```
print("TABLES:\n")
```

```
for t in result["tables"]:
```

```
    print(t)
```

```
    print("-----")
```

✅ ✅ EXPECTED OUTPUT

✅ Thermal DVP

```
{
  columns: ["CDT", "GHD", "HSD"],
  rows: [
    ["Distance Covered", 149, 243, 264],
    ["Front pad peak temperature", 163, 179, 188],
    ...
  ]
}
```

✅ Parking Brake DVP

```
{
  columns: ["Notch", "Effort", "Travel"],
  rows: [
    [0, 0, 0],
  ]
}
```

[1, 3, 43],

...

]

}

✅ ⚠️ IMPORTANT RULES

👉 DO:

DocLing handles tables ✅

Unstructured handles text ✅

👉 DO NOT:

mix table extraction inside Unstructured ❌

depend on raw text tables ❌

✅ 🚀 FINAL STATE AFTER DAY 3

Titles ✅

Text ✅

Tables ✅ (clean structured)

Schema ❌

Analytics ❌

✅ 🔥 BIG ACHIEVEMENT

👉 Now your system supports:

- ANY DVP ✅
- ANY table format ✅
- dynamic columns ✅

✅ ➡️ SOON NEXT (DAY 4)

👉 Build:

table cleaning + header normalization + units

✅ Say **Day 4** 🚀
